

POWERLINE GENETICS

Begin with the end in mind to finish what you start.

Fall 2019 born steers: This particular group of Powerline sired steers had an average HCW of 1003 pounds. 100% qualified for a branded beef program.

CCR Cowboy Cut 5048Z has been a staple in the Powerline group for the last few years. One of the reasons behind this bull's popularity is the diversity he offers in his calves. Here is a group of feeder cattle that didn't make it as bulls or replacement heifers but did generate premiums through the Power Genetics grid on retained ownership.

Premiums are generated separately for each category such as quality grade, yield grade, and carcass weight.

Powerline Genetics' multipliers have been participating in the American Simmental Association's Carcass Expansion project since 2018. The program was initiated to work towards improving the carcass genomics within the breed through DNA and actual kill data. Below, is kill data on another group of Powerline sired calves that was submitted to ASA.
